Porcelain floors  
made for outdoors

ALFRESCO  
FLOORS

## Why porcelain tiles?

- Simple to install
- Non-slip, frost-resistant
- Mould and algae resistant
- No maintenance, easy cleaning
- Resistant to abrasion, marking and scratching
- Precision manufactured for accurate installation
- Tougher than timber, stronger than stone
- Double depth tiles for exceptional strength
- Matching internal tiles across the range
- Multiple tile sizes available
- Colours that never fade

Maintenance free floors

## Made for outdoors

Tougher than timber and stronger than stone, 20mm porcelain tiles will not fade or change colour even after years of direct sunlight. Specialist variations on the standard tiles also provide steps, coping stones and pool drainage surrounds.

300 × 1200

A young girl with blonde hair, wearing a purple polka-dot shirt and shorts, is riding a pink bicycle on a paved path. The path is bordered by a low concrete wall and a lush green hedge. The background is filled with tall trees under a clear blue sky. The overall scene is bright and sunny, suggesting a pleasant outdoor environment.

## Super strong surfaces, that tread lightly...

The ecological advantages that Alfresco exterior porcelain offers over hardwood timber decking are obvious, but the sustainability story goes deeper than that. Alfresco Floors' tiles contain up to 70% recycled raw materials and everything is 100% reusable, once it finally reaches the end of its 50+ years lifespan (a lifespan which is effectively maintenance free, compared to the enormous ongoing costs of other exterior surfaces).

Taking into account the price of materials, the complexity of installation, and the legacy implications for maintenance – exterior porcelain floors cost about one third less than hardwood timber decking, and have a far better ecological profile.

## Alfresco Floors and Buzon pedestals

The perfect product for traditional mortar-bedded projects, these double-depth, double-strength 20mm tiles have also been specifically developed for installation on height adjustable pedestals.

Using this technique they require no complex substrate, no adhesive bedding material, no time consuming grout, and can be laid using nothing more complex than a simple spirit level. This fast, efficient, rock-solid and millimetre accurate raised floor system is perfect for covering large areas at maximum speed – and can even be installed as a DIY project.

The resulting floors are flexible enough that any tile can be quickly removed to gain access to pipes, cables or drain covers hidden underneath.

## AirScape®

A convenient combination kit of market leading products, AirScape® is the turnkey solution for new build or refurbished balconies and roof terraces. Super strong Alfresco Floors 20mm porcelain tiles on Buzon height adjustable and self-levelling pedestals (with optional acoustic AirScape® pads) provide a 'one stop shop' alternative to specifying and sourcing multiple components.

Strong enough to lay directly onto gravel

## Most precise product on the market

Our 20mm range is specifically designed for external use. Their superior strength plus consistent depth makes them the premium choice for architects and designers alike.
